other eastern points.

**Jefferson City & Kansas City Tr. 37**  
—Mail for Blackwater, Marshall, Kansas City and all points west. Mail leaves office at 2:17 p.m. Arrives at Kansas City 7:10 p.m., only day train west.

**St. Louis & Parsons, Tr. 3**—Mail for Pilot Grove, Sedalia, Oklahoma, Texas, Arkansas, Louisiana, does not leave packages at Clifton City. Pleasant

**St. Louis & Parsons Tr. 5 and 6**—These are night trains taking all mail deposited in office after departure of train 4. Train 6 arrives at St. Louis 7:59 a.m. carrying all eastern mail. Train 5 carries western mail, arrives Kansas City 7:29 a.m. but makes very close connection at Sedalia and if running as much as ten minutes late Kansas City mail cannot reach its destination until noon.

## COMMUNISTIC DREAM WOULD GIVE \$276 TO EVERY PERSON IN BOONVILLE

\$276 for every person in Boonville!

This amount, plus ninety-two cents is what everyone in our city would get if the communistic dreams of some of the rankest dreamers here came true, and the combined deposits of Boonville's two banks were evenly distributed among the populace.

Mathematicians, of course, can do most anything.

Believe it or not, as Ripley, the well known cartoonist, would say, if all the total deposits were converted into \$1 bills and plastered end to end on Highway No. 40 the line would extend from here to 93 miles on the other side of Kansas City.

If the bills were placed so as to cover the entire road, they would pave the macadam stretch west of Boonville on Highway 40 for a distance of three miles.

If the division of these funds among the people of Boonville were to be started tomorrow and all the money issued from one bank, the line would continue for twenty-four hours a day, seven days a week until July 29.

If all the money were taken to buy theatre tickets for boys ten years old, it would send six hundred small boys to the show every night, including Sunday, until they were eighty-seven years old.

If the money was converted into

ice cream cones it would buy 34,000—enough cream to make a small mountain, or cause several stomach aches if eaten in one evening.

If all these ice cream cones, full of cream, were stacked "end-wise" on top of each other, it would take a plane flying at the speed that Lindberg crossed the ocean 33 hours to reach the top of the stack.

If all the money belonged to one person, the interest at six per cent would pay one cent every three seconds.

If examined closely by a government expert, several bogus ten and twenty dollar bills might be found.

If everyone were content to own a used car, all the people in Boonville would be riding around with enough money to pay expenses for a month.

If stacked in one pile and left unguarded, some persons would probably get more than their share.

If anyone wishes to check these figures, here are the facts from which he can work: Bank deposits were \$1,702,000, considered \$1,700,000 for convenience; a paper dollar is seven and three-eighths inches long and three and one-eighth inches wide; the population of Boonville is estimated at 6,500; for the time required to draw funds from the bank, five minutes to a customer was taken as the average.
